

# SIP Trunking

SIP (Session Initiation Protocol) Trunking connects your business to the PSTN utilizing reliable and secure VoIP technology.

## Your phone system + our connectivity and voice services

When voice and data communications are superior, your business has a decisive edge. Connect and secure all your phone systems to one next-generation SIP Trunking platform.

Plus, utilize [Bring Your Own Cloud \(BYOC\)](#) to connect with a contact center platform and host your data in the cloud.

## More benefits, less costs

- |   |   |
|---|---|
|  Centralize Locations & Phone Numbers |  Geographic Redundancy                   |
|  Resiliency & Scalability             |  24x7x365 Local Support                  |
|  Business Continuity                  |  SLA with Quality of Service             |
|  Capacity & Utilization Reporting     |  Guaranteed Uptime & 99.999% Reliability |

# Take the complexity out of managing your own technology infrastructure.

## Easy Implementation

### Consult and Design

Whether 15 or 10,000+ call paths with your SBC or altafiber's SBC with AudioCodes – our experts will craft a customized plan for your business.

altafiber provides a dedicated connection with our diverse paths of connectivity.

### Deploy and Manage

Our engineers manage the installation and migration.

Take advantage of altafiber's dedicated support and 150 years of experience.

### Improve and Innovate

Analyze calls through our portal to identify opportunities for improvement.

## The altafiber advantage

We are a one-stop-shop. Don't go through the hassle of finding an internet provider + a voice provider + a cloud provider when our SIP Trunking with BYOC solution has all three.
